One component of the SHINE project is to lead an annual 3-day summer Train the NanoTeacher workshops for regional high school and community college educators.

New nanotechnology educational modules will be developed for the Train the NanoTeacher workshops. These new activities will be developed as a collaborative effort between NSCC faculty and industry and academic partners who are experts in their field. Although each workshop will provide an overview of nanotechnology topics, each summer, a different subsection of nanotechnology will be featured with a new educational module, including: Solar Energy; BioNanotechnology; and Electronics / Photonics.

Train the NanoTeacher FREE Summer Workshop July 17th - July 19th, 2013

Federal Way Public Academy, Federal Way, WA

Summer 2013 Train the NanoTeacher brochure

Join us for a free 3 day summer workshop introducing High School and Community College Educators to Nanotechnology. Educators will learn how to bring this emerging science into the classroom through interactive experiments and curriculum that are aligned with WA, ID, and OR state learning requirements.

Participants Receive

- **$300 Stipend**
- **Breakfast and lunch**
- **Supplies to bring back to your classroom**
- **Clock Hours through North Seattle Community College Continuing Education**

For more information or to register, please contact Maureen Devery at 206.934.7014 or shine@northseattle.edu
